NXT SCHOOL · META BUDGET MATHS · 21 OCT 2026

Is 150k RSD enough? Yes to learn. No for 30–40 kids.

The plan (150k RSD, floor 120k) assumed a cost per lead of **750–1,000 RSD**. Our test and the funnel maths put the realistic middle at **~1,450 RSD**, so 150k buys **~100 leads → ~20 enrolled**. One child brings 35,400 RSD, so ads pay back even in the bad case. The risk is **volume and time**, not return.

1 What our €128 test really showed

	UPIS ADS · 12–19 OCT	SIMULTANKA BOOST · 15–16 OCT
Setup	Leads · **3.2 km radius** · 30–45 · €10/day	Traffic · city of Novi Sad · 30–45
Spend · reach	6,267 RSD · 5,482 (freq 2.6)	8,760 RSD · 22,340
Link clicks	**276, 76% of them Audience Network junk**	631 · CTR 1.57% · 14 RSD each
FB + IG only	65 clicks · CTR **0.70%** · **83 RSD**/click	CTR 1.36% · 73% load the page
Result	**0 leads · only 15% of clicks load the page**	**461 page views at 19 RSD**

Takeaway: 1,170 RSD/day in a 3.2 km circle can't teach Meta anything. The pixel sees only visitors who accept cookies (≈40%), so 1–2 tracked leads were expected: 0 proves nothing. Parents click a **free, concrete event** at ~1.5% CTR; generic "about NXT" copy gets 0.7%.

2 How big is the market

372,136 Grad Novi Sad, 2024

≈30,600 children aged 7–14 (grades 1–8)

≈21,900 families (≈1.4 kids each)

4,400–6,100 can pay 5.9–7.2k/month and live within commute

30–40 **goal = 0.5–0.9% of them** in one window

Doable only if the city sees us several times: ~60k of its ~140k adults aged 28–52, 4 times each = 240k impressions × ~520 RSD CPM ≈ **125k RSD/month**. That is the floor for being seen at all.

3 CPL and enrolment forecast (website form on /upis/, Audience Network off)

CPL = CPM ÷ (1,000 × CTR × page-load rate × form conversion) · enrolled = leads × lead-to-enrolment rate (call + meeting)

SCENARIO	CPM	CTR	LOAD	FORM CVR	CPL	LEAD→ENROL	100K RSD	150K RSD	FOR 30–40 KIDS
Bad (like our test)	600	0.7%	75%	3%	3,810	15%	26 leads → 4	39 → 6	760k–1M
Base (fixed setup)	520	1.0%	80%	4.5%	**1,444**	20%	**69 → 14**	**104 → 21**	**217k–289k**
Good (a clear winner)	450	1.2%	85%	6%	735	25%	136 → 34	204 → 51	88k–118k

The old plan's 30–40 kids from 150k only happens in the "good" row. Open Day sign-ups are cheaper (free event, ~400–800 RSD each); ~55% come and 25–40% of those enrol.

4 What testing costs, and what we can afford

QUESTION	DATA NEEDED	RSD	
Which of 5 messages stops parents?	~4,000 impressions per ad (CTR)	≈10k	yes
Which gives the cheapest leads?	≥10 leads per angle × 5	≈72k	top 2
Landing page A vs B?	~1,500 visitors per version	≈200k	no
Exit Meta "learning"	50 leads/week ≈ 10k RSD/day	≈72k/wk	no

So: test messages on clicks (cheap), move budget to the top 1–2 by day 5–7, and fix the page with Clarity recordings, not a formal A/B test.

5 Why the money is safe

PER ENROLLED CHILD	RSD
Revenue (founding 5,900 × 6 payments)	35,400
Media cost per child (CAC), base case	**≈7,200**
CAC, bad case	≈25,400
Break-even CPL (20% lead→enrol)	7,080
Children needed to repay 150k	≈4–5

Even the bad case earns money per child. The danger is too few children by 9 Nov, not losing money on ads.

Recommendation: 19 days left until the 9 Nov start

22–26 Oct · Open Day	2,500/day Open Day + 3,500 prospecting	≈30k
27 Oct–8 Nov · Upis	4,500/day prospecting + 1,000 retargeting	≈70k
Total now	Base forecast **≈15–18 enrolled** (range 6–37)	**≈100k**
Keep for January	warm audiences + real class content	≈50k

For the client: **150k = ~20 November kids + a warm pool for January.** 30–40 kids need ~220–290k or two waves.

Fix before spending the next dinar

- FIX Turn Audience Network off (it took 76% of clicks)
- FIX Novi Sad +15 km, ages 28–52 (not a 3.2 km circle, 30–45)
- FIX ≥ 4,000 RSD/day in one prospecting ad set
- FIX Back-up card or prepaid funds so ads don't stop
- FIX GTM off staging2 (tests pollute the pixel)
- TRACK Count real leads from form entries + UTMs (Meta sees ~40%)
- TRACK Check why only 15% of upis-ad clicks load the page
