YEA PROTEIN · META + GOOGLE · FROM NOV 2026

Daily budget rules

How much to spend per day, by period and campaign type, and when to raise or lower it. Reference numbers are from Aug – Oct 2026.

1. Daily budget by period

starting points · special sales go on top, never instead of Regular

PERIOD	REGULAR	RETARGETING	GOOGLE	TOTAL / DAY	SPECIAL SALE	EXPECT ORDERS / WEEK
Off-season now – 15 Nov · 7 Jan – 28 Feb · from 3 May	€20	€5	€4	€29	+€15–25	30–40
Pre-season 16 – 26 Nov · 1 – 14 Mar	€25	€7	€5	€37	+€15–25	35–45
Peak 27 Nov – 13 Dec (Black Friday + fast weeks 1–2) · 15 Mar – 4 Apr (Lent weeks 1–3)	€40	€10	€8	€58	+€25–35 Black Friday 4 days	50–80
After peak 14 Dec – 6 Jan (holidays) · 5 Apr – 1 May (rest of Lent)	€25	€7	€5	€37	—	25–40

Regular = one always-on campaign for the best sellers (Chocolate, Vanilla Caramel, 2× Combos), broad or lookalike audiences. **Retargeting** = site visitors, cart, and past buyers 25–45 days after their order. **Google** = Brand all year, plus "posni protein" search in pre-season and peak. Reference: Aug–Sep ran about €33/day on Meta + €6 on Google and brought 30–40 orders a week. Rules can take each number up to **1.5× its start** before the next period.

2. Targets by campaign type

Meta cost per purchase, last 7 days, in Ads Manager

TYPE	RAISE IF	HOLD	LOWER IF	STOP WHEN	REFERENCE NOW
Regular	≤ €18	€18–30	> €30	An ad spends €40 with 0–1 purchases → turn that ad off	Broad, Aug–Sep: **€24**, while all orders cost €7–9
Retargeting	≤ €6	€6–10	> €10	7-day frequency over 3 → new ads, no raise	Remarketing €2/day: **€3.5**, but frequency 11
Special sale	≤ €10	€10–18	> €18 after 3 days	Over €30 after €100 spent → stop, money back to Regular	Cherry −1.000 din, Sep: **€10.5** ✓ · Cherry + EasyGut, Oct: **€48** ×
Test new angles		fixed €10–15/day for 7 days		Ad over €40 with 0–1 purchases → off. Winner ≤ €25 → move to Regular	Angle test, Oct: **€39** × (all Sour Cherry)
Everything together check this first	≤ €10	€10–14	> €14 2 weeks	All ad spend ÷ all WooCommerce orders, per week	Aug–Sep **€7–9** · last week **€27**

3. Rules for raising and lowering

1. **When:** Regular and Retargeting once a week (Monday, last 7 days). Special sales every 2 days, because they are short.
2. **How much:** +20% up or −20% down, one step per check. The only bigger jump is the planned switch on the first day of a period.
3. **Raise only if all 3 are true:** the type is in "Raise if", everything together is ≤ €10, and Chocolate + Vanilla Caramel are in stock.
4. **Undo a raise** if the next week brings less than 1 extra order per €12 of extra spend. Go back to the last budget that worked.
5. **Special sales:** max 14 days, max 40% of total spend, on top of Regular. Lead with best sellers or Combos. A sale on a flavor with ~5% of demand (Sour Cherry) stays at the low end (€15/day).
6. **Stock first:** if a best seller is out, Regular drops to €10/day and nothing is raised until it is back. Never advertise what is out.

Do this week (2 – 8 Nov) · about €37/day

→ **Start a Regular campaign at €20/day** for Chocolate, Vanilla Caramel and Combos. Nothing always-on has run since late Sep.

→ **Cherry + EasyGut until 8 Nov:** pause Lookalikes (€92 → 1 purchase), keep Sajt i Korpa €5 + Kupci €3.

→ **Pause the Sour Cherry angle test** (€39 per purchase). Its €16/day pays for Regular.

→ **Remarketing €2 → €5/day** with new ads (frequency is 11). Google Brand €4/day.

Reference: Meta campaigns 1 Aug – 1 Nov 2026 (Meta's own purchase counts, for comparing campaigns), Google Ads, GA4 weekly orders (for the totals). Nov 2026
