

Control beats volume.

Find the few ads that already work, test one variable at a time, fix the first leak in the funnel, and scale against your break-even maths.

+45%

revenue on the same spend after cutting 70 of 100 ads

1,000+

impressions each ad needs before you judge it

10%

add-to-cart rate to aim for

80/20

budget split: new people vs retargeting

0 What each video adds

1h 53m

The full tutorial

The master build: profit equation, click-by-click setup, copy, landing page and audience tests, retargeting, break-even ROAS.

17m

Understand the data

ROAS is an output. Read the account like a river and fix the first blockage. \$48k → \$108k/month on the same spend.

27m

Scale on a low budget

Andromeda volume needs money. Small accounts must force spend onto proven ads. New account hit 6.7x in month 1.

27m

Creative strategy

Your ad history is a test you already paid for. Mine winners, decode them, cut the rest. CPA \$21 → \$9.

20m

Killer creatives

Start from one customer problem with evidence. One angle per ad, proven visually. High CTR ≠ sales.

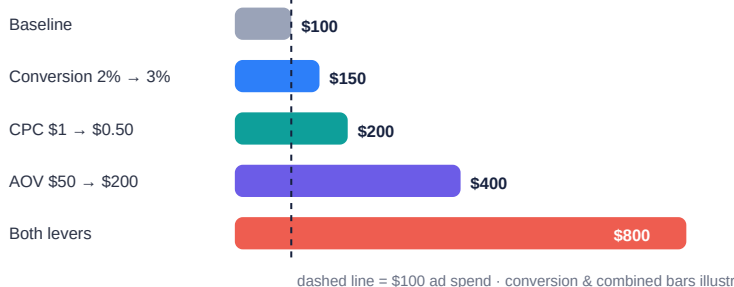

1 The profit equation

Every tactic moves one of three levers. Pull the cheapest one first, and only one at a time.

$$\text{Revenue} = (\text{Ad spend} \div \text{Cost per click}) \times \text{Conversion rate} \times \text{AOV}$$

Baseline: \$100 at \$1 CPC, 2% conversion, \$50 AOV → 100 clicks, 2 sales, \$100 revenue (a loss after costs)

Revenue from the same \$100 of ads

Lever	Move it with
Cost per click	Cut costly ads, test hooks, copy and audiences
Conversion rate	Landing page test, social proof, shipping threshold, retargeting
AOV / LTV	Bundles, 2-for/3-for deals, add-ons, subscriptions

2 The stairway: one variable per step

Isolate one variable, keep the winner, cut the rest, then climb. Change five things at once and you learn nothing.

1 Creative

5-15 mixed ads, broad, impression cap

2 Copy

#1 ad, one text per ad set. Skip if link CTR $\geq \frac{1}{2}$ CTR

3 Landing page

Home vs collection vs product vs custom, ~\$100 each

4 Audience

One interest per ad set, \$10-20/day

5 Scale

ASC "winning assets" + interests + retargeting

The flywheel runs beside, never inside. New creatives get tested in a separate campaign and only move into the money campaigns once they beat the current winners. Audiences come 4th: a weak ad wastes your one first impression.

Step 1 in depth: the creative test

Left alone, Meta gives 80-90% of spend to one or two ads. An impression cap forces every ad to get the same fair exposure.

Setting	Choice
Objective	Sales, optimised for Purchase (never add-to-cart)
Budget	Campaign level
Audience	Broad, "acquire new customers"
Off	Dynamic creative, catalog, end date
Ignore	Campaign score (a 40 can beat a 100)

Rule: select test ads → turn off when impressions > 1,000, checked continuously. Use 2-3k if budget allows; 800 on a new pixel with \$50-70 CPMs.

Days = Ads × CPM × (cap ÷ 1,000) ÷ Daily budget

e.g. 8 ads × \$30 × 1 ÷ \$30/day = 8 days

Not a winner

5x ROAS on \$12 of spend, or "the ad with most sales" when it was the only ad funded.

Winner

Reached the cap, passes the benchmarks below, and shows buying behaviour. Keep 2-5.

Existing account?

Sort by spend, not ROAS. Retest "shadow" ads: an identical copy spent \$72 vs \$3,000.

3 Read the account: find the first leak

ROAS shows *that* something changed, never *why*. Follow the river downstream and fix the first blockage only.

Layer	Metric	Healthy	If weak, fix
Attention	CTR (all)	> 2-3%	Hook, first frame
Interest	Link CTR	≥ 50% of CTR (all)	Message, offer, CTA → copy test
Cost	CPM	~\$28-30	Judge against CTR, never alone
Page load	Clicks → page views	Small gap	Speed, tracking, mobile
Intent	Views → add to cart	≥ 10%	Ad-page match, reviews, price, CTA
Cart	Cart → checkout	≤ 50% lost	Shipping surprise, upsell clutter, hidden button
Checkout	Checkout → purchase	≤ 50% lost	Payment, trust, 5%-off-for-24h retargeting

Tutorial account

17,000 views → 1,500 carts (8.8%, fine) → 628 checkouts. Cart-to-checkout is the constraint.

Apparel brand

Ad metrics healthy, but 5% add-to-cart and 1 in 7 carts bought. They fixed the page, not the ads.

Outdoor brand

4.9% add-to-cart still gave 6x, but only thanks to a \$250 AOV. At \$50 it would sink.

4 Make creative: evidence first, format last

- **Mine customer words:** reviews, comments, tickets, surveys, Reddit, competitor reviews. Find what buyers want, what stops them, what they've tried.
- **One problem, one angle, one sentence.** Warranties and returns belong on the landing page.
- **Show every claim.** "Fits under the desk" → film it under the desk.
- **One product, many angles:** blackout blinds sold for nurseries, RVs, truck cabs, studios.
- **Decode winners:** format, idea, hook, selling point, funnel numbers, landing page match.
- **Real beats polished:** phone videos beat a \$100k commercial.

Walking-pad example

Angle	Steps while you work, no giant treadmill
Hook	"Finish the day on 800 steps when your goal was 10,000? Keep listening."
Proof	Slides under desk; serious call, camera pulls back to show walking

CTR can lie: a "satisfying" video hit 10.9% CTR and sold nearly nothing. A plain before/after demo at 6.3% sold, because viewers knew what they were buying.

Branch a winner, one change at a time

New hook: pain, question, stat

New creator: customer, expert

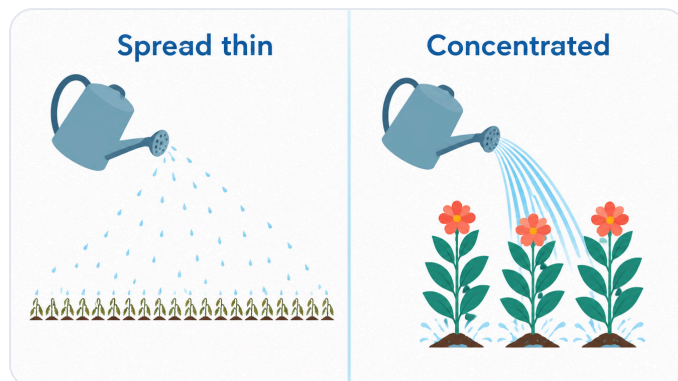

New format: carousel, static

New offer: bundle, gift, deadline

New message: benefit, scarcity

New angle: transformation, proof

5 Structure: concentrate the money

Budget/day	Ads live	Campaigns
~\$30	1-3	1 prospecting + \$5-10 retargeting
\$100-700	2-5 winners	ASC + interests + retargeting
\$1,000+	More; volume pays	Add persona buckets

80-90% finds new people, 10-20% retargets

Top · 80-90% — broad/interests, best ads, educational. Judged on cost per purchase.

Middle — 50% video viewers + social engagers, minus site visitors. More education and pain points. Judged on clicks only.

Bottom — carts, visitors, buyers 30-180 days ago. Reviews, unboxing, 5% off for 24h. Judged on purchases.

6 Unit economics and scaling

$$\text{Break-even ROAS} = \text{Order value} \div (\text{Order value} - \text{product} - \text{fulfilment} - \text{fees})$$

$$= 100 \div 60 \approx 1.67$$

Profit per \$100 order, by ROAS

Scale zone

Above ~3x, push budget in **\$10-20/day steps**.
An 8x target can block growth that 5x would fund.

LTV vs payback

Repeat buyers justify a thinner first order, but a \$900-over-3-years customer doesn't justify \$850 today.

Market tops out ~\$500-700/day

Go broader with mass-appeal creative, or add a **persona bucket** with its own ads, page and maths (e.g. Hollow Socks: hunting vs compression pages).

7 Myths vs reality

Popular advice	The playbook's answer
Feed Andromeda 15-20 new ads a week	Only at \$1,000+/day; small budgets starve every ad
Let Meta pick the winners	Meta funds early engagement; cap impressions and judge fairly
Performance dropped → make new ads	Find the first leak; it is often after the click
Target the obvious interest	Target what buyers <i>do</i> : matcha, yoga and Whole Foods beat Lululemon/Nike
Every campaign must hit target ROAS	Middle-funnel retargeting only has to drive clicks

✓ Action checklist

- ☐ Save a custom column preset (CTR, link CTR, CPM, carts, checkouts, purchases, ROAS)
- ☐ Calculate break-even ROAS; choose profit-first or growth-first
- ☐ Audit 6-12 months at ad level sorted by spend
- ☐ Run a capped creative test; keep 2-5 winners
- ☐ Copy test if link CTR < half of CTR (all)
- ☐ Landing page test: home vs collection vs product vs custom
- ☐ Walk the funnel on a phone; fix the first failing step
- ☐ Launch ASC "winning assets" + 3-5 single-interest ad sets
- ☐ Retargeting (middle + bottom) at 10-20% of budget
- ☐ Add one AOV lever: bundle, quantity break, shipping threshold
- ☐ Brief variations from winners; test beside the main campaigns
- ☐ Scale in \$10-20 steps; add a persona bucket when results swing
