YEA PROTEIN · STRATEGY & ADS

What to do next

The most impactful moves, ranked. Based on GA4 orders, the Meta account and the live shop.

~80
orders a month in Oct 2026, −72% vs Oct 2025

€12/day
on Meta for Yea now, vs €125–175/day in 2025

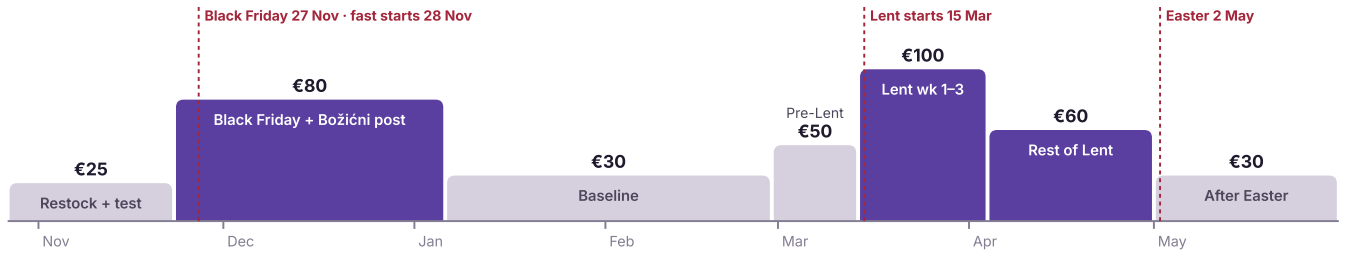

5 of 12
flavor + size options in stock, and 0 Combos

3.5×
more orders in the first week of Lent, both years

The short version. Demand didn't disappear. Yea ran out of its best sellers, dropped the Combos that brought most of the revenue, and nearly stopped advertising. Fix the product side first, then put budget behind the fasting seasons.

Ad budget calendar

suggested Meta €/day, including retargeting · a starting point to scale from

Strategy

1. **Stock the best sellers before 20 Nov**
   Chocolate and Vanilla Caramel are **over half of flavor sales**. Vanilla Caramel sold 1 unit in June because it was out. Keep both sizes in stock with a reorder point, never advertise what's out, and fix the homepage line "6 ukusa".

2. **Bring the Combos back as the main offer**
   2× and 3× packs were **24–37% cheaper per kg** and brought **40–66% of revenue** from Dec to Jul. Lead with 2×1kg and 2×500g. Keep 3× for stocking up before a fast.

3. **Own "posni protein"**
   Fasting drives demand. Orders jump 3.5× in the first week of Lent and fall ~60% the week after Easter, in both years. Make it the headline on the site and in ads, and plan the year around **Božićni post (28 Nov – 6 Jan)** and **Veliki post (15 Mar – 1 May 2027)**.

4. **Fix trust and claims**
   Product pages show **0 reviews** next to "10.000 zadovoljnih kupaca", so add real reviews. Have a lawyer check claims like "jača imunitet" and the diabetes and insulin-resistance lines.

5. **Keep EasyGut out of Yea's budget**
   From Apr to Jun, **31% of the Yea account's spend** went to EasyGut, which returned only 0.2–0.8× its cost. Give it its own budget so it never pulls money from Yea.

Ads

1. **Fund the seasons, then scale on real revenue**
   Follow the calendar above. Raise budget in **+20% steps** while total revenue ÷ total ad spend stays **≥3×**, which is the 2025 level (confirm the target against margin).

2. **One always-on prospecting campaign**
   Advantage+ Sales, broad Serbia, showing the best sellers and the Combos. Sour Cherry runs as one ad, not the whole campaign, since it is only ~5% of demand.

3. **Retargeting always on**
   Meta reports 2–15× return on just €2–3/day. Run **€5/day**, or **€15/day in peaks**, with three groups: cart 14 days, visitors 30 days, and a refill group for buyers from 25–45 days ago (1 kg ≈ a month of daily shakes).

4. **A "posni" creative set live before 28 Nov**
   5–6 ads: a posni breakfast recipe, a shaker routine, a flavor lineup carousel, a Combo value static, and creator videos run as partnership ads. Don't use health-professional titles in ads.

5. **Plan the offers around the fasts**
   "Spremi se za post" Combos from 20 Nov leading into **Black Friday 27 Nov**, and a Lent bundle from 8–15 Mar.

6. **Check Google Search, measure in Woo/GA4**
   Paid search orders fell from **255 to 22 a month**, so check the budget and run "posni protein" and brand searches in season. Judge results by weekly orders and revenue: Meta once counted 773 purchases for one campaign in a month when the whole site had 601 orders.

Stop doing

- Sour Cherry as the main ad
- Ads for out-of-stock flavors
- Judging success by Meta purchase counts
- Sharing Yea's budget with EasyGut
- Going dark between seasons

Next 4 weeks

in this order

By 3 Nov
Confirm restock dates for Chocolate and Vanilla Caramel. Turn the 2× Combos back on.

By 10 Nov
Brief and make the "posni" creative set. Restart prospecting at €25/day and retargeting at €5/day.

20 Nov
"Spremi se za post" Combo offer goes live. Google Search on "posni protein" and brand.

27–28 Nov
Black Friday, then Božićni post starts. Move Meta to ~€80/day and scale on revenue.
