YEA PROTEIN · NOV 2026 – MAY 2027

Budget by stock & landing pages

How much ad money the stock can carry, and where every ad should send people.

How much ad budget the stock can carry

rough model, built from last year's sales

The rule

Max ad budget for a period = **(units in stock ÷ units per order − orders you get without ads) × cost per extra order**

€470
of ads per 100 units in **Lent** (€7 per extra order)

€800
per 100 units in **Božićni post** (€12 per extra order)

€1,300
per 100 units **off-season** (€15 per extra order)

Units the budget calendar needs

PHASE	€/DAY	AD SPEND	ORDERS	UNITS
Restock + test · 27 Oct – 23 Nov	25	€700	~100	~120
BF + Božićni post · 24 Nov – 6 Jan	80	€3,520	~380	**~570**
Baseline · 7 Jan – 28 Feb	30	€1,590	~210	~240
Pre-Lent · 1 – 14 Mar	50	€700	~100	~140
Lent weeks 1–3 · 15 Mar – 4 Apr	100	€2,100	~340	**~510**
Rest of Lent · 5 Apr – 1 May	60	€1,620	~290	**~430**
After Easter · May	30	€900	~120	~140
Total, 7 months		**€11,130**	**~1,540**	**~2,150**

Units needed per flavor vs stock today

FLAVOR	SHARE	NOV–MAY	IN STOCK NOW
Vanilla Caramel	34%	**~740**	500g + 1kg · qty ?
Chocolate	24%	**~520**	1kg only · qty ?
Neutral	14%	~300	out
Vanilla Cherry	13%	~280	out
Strawberry	10%	~220	500g · qty ?
Sour Cherry	4.5%	~100	500g · 141

Only Sour Cherry shows a quantity. Turn on stock tracking for every flavor in WooCommerce, then use the rule above before each phase. If Chocolate + Vanilla Caramel can't cover ~60% of a phase's units, lower that phase's budget to what stock carries.

Sour Cherry is leaving the range: 141 units is ~1.4× its whole Nov–May demand. Keep the EasyGut-gift offer to 8 Nov, then sell the rest in a mixed 2×500g with Vanilla Caramel. Never make it the main ad.

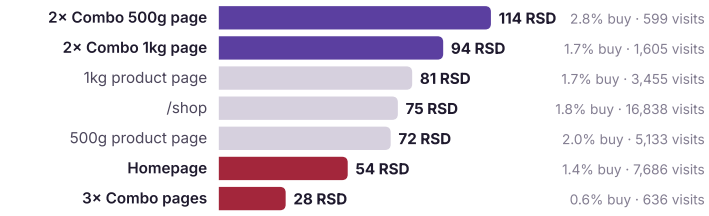

Assumptions: ~60 orders a month without ads · 1.15 units per order (1.5 when Combos are on) · cost per extra order from Lent 2026 and Aug–Oct 2025 vs 2026 · flavor shares from Sep 2025 – Mar 2026 sales. Confirm against margin.

Landing pages

where ads lead, and what the page needs

Revenue per visit from Meta ads, by page

Nov 2025 – Oct 2026

2× Combo pages earn the most per visit; the homepage and 3× packs the least. The old Combo pages now return 404, so rebuild them before any Combo ad runs.

AD TYPE	SEND TO
Combo / offer ads	The 2× Combo page (rebuild: 2×1kg and 2×500g, pick any two flavors)
One-flavor ads	Product page with the flavor pre-selected: `/proizvod/yea-protein-1kg/?attribute_ukus=Chocolate+Flavor`
"Posni" + season ads	New page **/posni-protein**, live by 20 Nov
Broad, many flavors	/shop, until /posni-protein is live
Retargeting	Cart → /cart · visitors → the product they viewed · refill → their flavor or the 2× Combo
Never	homepage · 3× Combo pages · out-of-stock flavors

1 · Posni protein · pack photo · price per kg · free delivery · [Izaberi ukus]

2 · Pick · in-stock flavors + 2× Combo with the saving

3 · Why posni · yeast protein · 9 amino acids · no added sugar

4 · 3 posni breakfasts · oats, smoothie, pancakes

5 · Real reviews · photos + names

6 · FAQ · delivery 2–3 days · card −5% · returns 14 days

Dodaj u korpu · sticky on mobile

How every landing page should look

- **Same promise as the ad.** A Chocolate ad opens on Chocolate, a Combo ad on the Combo, a posni ad on "Posni protein".
- **Buy on the first screen.** Price, flavor picker and add-to-cart visible on a phone without scrolling; the button stays pinned.
- **Only what's in stock.** Hide sold-out flavors and drop "6 ukusa" while there are 3.
- **Show value per kg.** Put the 2× Combo next to single packs with price per kg and the saving in dinars.
- **Real reviews near the top.** Every product page shows 0 reviews today.
- **Allowed claims only.** Say what's in it; skip immunity, diabetes and skin claims until a lawyer approves them.
- **Fast on mobile.** The homepage takes ~1.4 s to start loading; check PageSpeed.
