What an order really cost

all ad spend ÷ all shop orders, per month

Fasts cost €7–10 an order. Off-season months with €4–7k budgets cost €14–18, because extra money off-season buys few extra orders. Under €2k off-season stays at €7–9.

How much per season

Peak (Lent): €4–5k a month, about €115–150 a day on Meta.
Fast (Božićni post, BF): €2.8–3.6k a month.
Off-season: €1.5–1.8k a month. More than ~€2k off-season wastes money.
Google: Brand €250 every month, +€350 "posni protein" search in Lent.

Weekly check: cost per order

Total ad spend that week ÷ all WooCommerce orders that week.
Under €10 → raise budget +20% (up to the "max" column).
€10–13 → hold, swap in fresh ads.
Over €13 for 7 days → cut 20%. Never above €15 (that is under 2.5× return).

Stock decides first

If Chocolate or Vanilla Caramel is out, run the off-season budget whatever the month says. Order tubs for the next two months before each fast (column "Tubs").

Lent moves later in 2027. In 2026 Lent ran 23 Feb – 11 Apr, so Feb + Mar peaked. In 2027 it is 15 Mar – 1 May, so the peak is **mid-March + April**. Keep February at off-season budget.

Stock to have ready: by 20 Nov about **900 tubs** for Nov–Dec. By 1 Mar about **1,890 tubs** for Mar–Apr. Over half should be Chocolate + Vanilla Caramel.

Why ~€16k less than last year. The cut comes from off-season months that cost €14–18 an order (Sep–Oct 2025, Dec, Jan). Fast months keep about last year's budget, and can go to the "Max budget" column if cost per order holds.

Actuals Sep 2025 – Oct 2026: GA4 orders, Meta (minus EasyGut), Google Ads. Average order 4,443 RSD ≈ €38 at 117.2 RSD/€. Tubs assume Combos are back (1.6–1.9 per order). Conservative: orders are lower now (81 in Oct).
